The Solarwinds hack in the light of International Law and Cyber Security

Yunus Emre Gül (Institut für Völkerrecht, Uni Bonn) & Marc Ohm

What makes an incident a cyber attack? The answers to this question heavily relies on your profession. This Oberseminar brings together researchers from the Institut für Völkerrecht and the Working Group IT-Security. Yunus Emre Gül and Marc Ohm recall basic notions from international law and cyber security to discuss the Solarwinds hack.

Being an interdisciplinary event, we encourage the audience to discuss their questions with the experts of the complementary field.
